Mobile App Development Project

Kent Kobi - 45989222

App Name	Travel Wishlist
Published link	https://exp.host/@kentkobi/travel-wishlist
Desired Platform	iOS
Tested on	Running application on iPhone 12 Pro Max.
Description	Travel app where a user can sign up to create & organise travel wish-lists for a number of trips. Wish-list items are categorised and filterable. Trips and Trip items can be deleted by swiping left.
Notes	Managing data via the DataManager was a more time intensive development effort than I expected. Navigation is confusing to set up at times. FlatList seems to be quite handy!

Application		
Components		
(for brevity of the report, individual components are not listed)		
Config		
	AppColors	Site-wide colors
	DataManager	Data storage for users, trips, and trip items
